

Sequel: Impact

Visualize your total exposure in one view
and manage your cross-class aggregations

Sequel Impact

Upload risks, augment with external data, and quantify your total exposure in seconds. Sequel Impact is a powerful web-based analytical engine that helps you understand your exposure in real time.

Visualize your cross-class aggregations

- Calculate loss scenarios in real time to see your total exposure in a single view
- Integrate with data providers to leverage all available information
- See the impact of a newly quoted policy, or the projected impact of an impending catastrophe
- Overlay simulated events such as hurricanes, earthquakes, fires or floods onto designated geographic areas for pin-point risk analysis and “what if” scenarios

A deeper view

Comprehensive data analysis

- Deterministic pin point risk analysis
- Data augmentation and model integration capabilities
- Imports and exports data in a variety of formats
- Flexible data recording and aggregate reporting
- Analyzes any insurable risk across any line of business, by any metric
- Visualize non-modelled catastrophe risk
